You also agree that no government authority has examined the information contained in this WHITE PAPER, therefore it may not fall within the jurisdiction of any country or territory.

"Limiting the spread of white paper"

Please note that the distribution of this White Paper may be restricted in any country or territory and may be against applicable local laws, and if you do intend to distribute it in any form, you will be responsible for complying with applicable local, national and international laws.

"Cautionary Note on Forward-Looking Statements/Outlook"

By their nature, forward-looking statements involve risks, there is a risk that forward-looking statements may not prove to be true, and therefore forward-looking statements may not be achieved or fulfilled, so investors should understand and consider that forward-looking statements may produce results that are materially different from those anticipated by forward-looking statements from provisions. Any kind of information reflected in the WHITE PAPER and the statement can be considered as forward-looking, such as for example: the plans of the company; goals; Business strategy and more. We warn you, the information presented here are future plans, which we intend to implement in the future. Do not treat the information presented here as any kind of promise or advice, therefore we disclaim all responsibility for its non-fulfillment or unavailability, which may change or fail to be fulfilled due to various conditions. These predictions are accurate as of the date they are made. The information contained in the WHITE PAPER may be revised, updated and any changes made to it in the form of information that registered users will receive as a notification. Those users who will not be registered will have the opportunity to get acquainted with the news according to their wishes.

"No offer of securities"

The GCWine (GCW) token isn't meant to be used to buy stocks or other financial papers, and it's also not meant to offer you any investment services or advise on investing in any particular nation or region. This White Paper does not constitute sales advice or opinion, nor does it offer a solution to problems, nor is there any offer, nor will there be in the future, for you to purchase GCWine (GCW) Token or give it any preference over another. Do not base any type of contract or investment decision on it. We warn you that buying a GCWine (GCW) token does not mean that you have any right to the shares of the company "Cradle of Georgia Wine". By buying a GCWine (GCW) token, you are only buying this token.

"Risks and instability" "Exercise Caution and Attention"

Prospective purchasers of GCWine (GCW) Tokens should, when purchasing any GCWine (GCW) Token (as mentioned in this White Paper) be careful to assess all the risks and uncertainties associated with it, as any kind of risk could cost you everything of value. There is no guarantee that the use of this White Paper or any part thereof will provide you with the results described in it and that you will receive any financial benefit, and this is entirely at your own risk and responsibility. Trading is a very risky activity that can lead to huge losses, so be careful and use professional advice when evaluating the information here. Before making a decision, please consult with the appropriate persons. We warn you, transfer BNB only from the wallet whose PRIVATE KEY you control, under no circumstances transfer from any exchange or market, this will lead to the loss of your tokens, for which you are responsible.

Company activity

Please note that this is not a trade prospectus, which contains the description of goods and terms of purchase, the information contained in this section reflects only the activities of the firm.

Georgia Wine Cradle is a business that was founded in Georgia and is therefore subject to the regulations established by Georgian law. Georgia Wine Cradle is a company whose goal is to become the largest wine exporter and producer, not only in Georgia, but also abroad, to introduce and popularize the uniqueness of Georgian wine culture, the tradition of its preparation and production, which Georgians have in their genes, passed from generation to generation, and This tradition continues to this day. Georgia is the homeland of wine, where almost every family with a history of 8000 years continues to make wine, some make it for their own families, some have turned it into a source of business, nowadays they are the owners of a quite successful and leading wine company and have introduced their product not only to Georgia, but to the whole world. There are wine production companies in Georgia that have fully exploited the local market, they take part in many competitions that help local companies to release their products and raise awareness, however, the world market is very competitive and it is necessary to plan a marketing strategy to establish a place, and for this, there is a lot of work to be done. This is where our short-term plans come from.

Short term plans

The goal of "Georgia Wine Akvan" is to help Georgian wine companies who want to export their products to the international market in order to better introduce to other countries the Georgian winemaking tradition, its unique taste and aromas. Our goal is to work with successful and well-known wine producing companies that have made a name for themselves in both the local and international markets, but do not have a large-scale coverage. We will start increasing exports to the international market with European countries, because Georgia is the homeland of the oldest Europeans, this fact has been studied and confirmed by science, and very few people know about it. European countries are the largest producers of wine in the world and therefore have a large number of consumers. The wine market is growing and developing every year, because countries have the potential to produce high-quality wine that meets the standards set in the world, therefore the number of wine-producing companies increases by 5% to 10% every year, and the volume of production increases accordingly, which is very beneficial for our company and gives us an incentive.

European way

Simultaneously with the start of export to European countries, a website will be created, where it will be possible to start sales immediately after arrival in the warehouses, so that you can purchase the products in the shortest possible time.

World road

In order to further expand exports to European countries, products will be exported to different continents according to the priorities of the

wine market size. When the distribution area of our products covers all the continents of the world, then the implementation of long-term projects will begin.

Long term plans

Construction of own factory.

Long-term plans aim to build their own factory. When our plans are implemented and together with our producers, we will set foot on the world market, we will start the construction of the "Georgia Wine Cradle" factory to produce our wine, the technology of which will be based on the ancient Georgian traditions and the latest winemaking methods, as well as the technological and scientific current in the world will be preserved standards, as a result of which we will create high-quality wine. In parallel with the start of our own wine production, we are planning to open Georgian shops and restaurants in different parts of the world in order to better introduce the uniqueness and traditions of Georgian wine culture to different countries of the world.

Finding partners.

When we successfully reach our goal, we will start to acquire partners in food business, shops, restaurants, bars to accept GCWine (GCW) token and also with our partners to be able to use GCWine (GCW) token as a method of payment. The main task of acquiring partners is the rapid growth of profits in order to make our production even more successful and developed in the service market. Cooperation with

partners also includes intellectual, physical and material support for product sales.

Why we decided to create a token and to make an ICO?

According to Ushangi Matiashvili, the founding director of Georgia Wine Cradle, blockchain is a technology of the future that needs to be developed and supported, and one of the best ways to do this is to integrate it into real business, which unfortunately Bitcoin has not been able to do so well, because Bitcoin has been established as digital gold and transfers. It cannot be used as a method of payment due to the high cost, for example, the first international bitcoin transaction, which has already passed into the past, when one of the programmers announced on the forum that he would pay 10,000 bitcoins for a pizza delivery, today the price of crypto currency is much higher, and the pizza mentioned above is the most expensive pizza in history. Today this pizza would cost several million dollars. In a few years it will become several hundreds of billions, it is quite difficult to take such a risk, so Bitcoin has turned into a store of value, which is often called digital gold. Therefore, it was necessary to create a token that will have a much larger total amount than Bitcoin, cost much less than Bitcoin and have much less transfer costs, because it is accessible to everyone and cheap to use, it also has an upper limit of the total amount like Bitcoin, so that inflationary printing does not happen, which we are used to from the so-called Cash.

This is how the idea of creating a new token was born, it was also necessary to connect this token to the market and engage in business so that it could function as a tax token, for this it was decided to do an

ICO, so that with the money received from the sold tokens, he could do his favorite work and use the token as a means of reporting and thus automatically It would connect the real business with the digital future.

Georgia has been enjoying the status of the homeland of wine for a long time. As in the family of all Georgians, in his family, Georgian wine is made according to the ancient traditional method, in the making of which he often took part, and he is quite familiar with the wine-making technique, which is ingrained in Georgians' genes. For him, the love of wine is associated with the cultural values, beliefs and customs of the Georgian people. In the rules, which have roots from ancient times to the present day, that is why it was aimed to create the GCWine (GCW) token with the help of the highly developed blockchain driving the digital world of the future, through which it will be possible to introduce Georgian wine and the unique culture of Georgian wine to the world.

What is GCWine (GCW) token?

GCWine (GCW) is a utility token and will become a bridge between the real business and the digital world. First of all, what we intend to do is to export and sell Georgian wine abroad, and with long-term goals to produce our own wine and engage in the food business. Wine will be the first thing you can buy with the GCWine (GCW) token.

What is a utility token and why BNB (BEP20) smartchain?

We are sure you have an idea and know how a token differs from a coin, but we will briefly review them.

A token is a digital unit of an already created coin such as ETH (ERC20) or BNB (BEP20) or another multi-blockchain that does not need its own blockchain and is created through a special contract, smart contract, that you can find on our home page. We chose BNB (BEP20) because it is quite developed and in terms of transfers, it is available and very convenient, of course ETH(ERC20) is one of the leading smart contracts, However, it is still fee-heavy, which is why we chose the second-place smart contract blockchain, which is not far behind it. You will also be able to see the smart contract on our home page, which will take you to the Token and Dex smart contract. There are various types of tokens, the most common and easy to use utility token as such is the GCWine (GCW) token, the usage of which is described below.

How to use GCWine (GCW) Token token

GCWine (GCW) is a utility token that you can use in our firm.

Use for short-term purposes

Using it for short-term purposes means using it as a method of payment. At first, the best quality Georgian wines produced by our partners will be sold on the market, you will have the opportunity to use the GCWine (GCW) token as a means of payment. This is done in order to raise and increase the awareness and efficiency of the use of the GCWine (GCW) token. We will also have 10% discounts on our products, for those who use GCWine (GCW) token as a payment method, and for those who choose other adaptive tokens BNB, ETH, BTC as a payment method, they will get a 5% discount, this is all done to expand crypto Limits and scope of money use.

In order to extend the use of GCWine (GCW) token, when our site is launched where you can buy wine, you will have the option to register and verify your wallet if you have 50,000,000,000,000,000 GCWine (GCW) tokens in your wallet and you have held the token for at least 6 months. Owners will be able to order wine under their own label. You will have the opportunity to buy wine that will have a label selected and created by you, only on the back label will be the information required by law and the inscription that the producer and exporter is "Georgia Wine Cradle". The front, main label builder tool, which you choose to design, will be embedded in the website and you will be able to open it only after the wallet verification, after which you will become a VIP user and enjoy this status for one year, after this period, you will be able to restore the status by re-verifying the wallet.

To prove that you have held the GCWine (GCW) token for at least 6 months.

Use for long-term purposes

When "Georgia Wine Cradle" will complete the construction of the winery and start producing its own wine, if you approve the holding of 50,000,000,000,000,000 GCWine (GCW) tokens in your wallet for one year, you will receive a two-year exclusive right to make your own wine by blending some of the 437 varieties of grapes available in Georgia. Tully will suggest what grape variety combinations can be used to create a new wine and also provide information on whether or not the wine you intend to create is mixed. The front side of the label will also be created with a design of your choice, and the back label will contain the information required by law and the inscription that the producer and exporter is "Georgia Wine Cradle". At the moment, a special tool for ordering and selecting grape varieties will be added to the site, as well as specific indicators of the order, regarding the quantity of the order, the cost of the products at the time of the order, and other important information, along with the development of the company, you can find them on the site under the title - Terms and Conditions. Along with the development of the company, the terms and conditions will also change, regarding which the registered users will receive information in the form of a notification by e-mail.

Shops and restaurants

You will be able to shop in our stores, get the best offers and discounts in our restaurants and various stores, pay with GCWine (GCW) token, for which you will get 10% discount, and in case of other crypto currencies you will get 5% discount. This principle will allow us to increase the circulation of crypto-money and allow members of the public to confidently use crypto-currencies outside the virtual world.

Tax unit in the food sector

When our chain of stores/restaurants is up and running, we will start looking for food business partners around the world who will accept GCWine (GCW) token and implement it as a payment system in their stores, restaurants or bars, which will further expand the coverage area of crypto, which is the desire of all crypto visionaries.

Ico current

The start of the ICO is September 1, 2022

Private sales from September 1, 2022 to November 30, 2022

Public sales from December 1, 2022 to November 30, 2023

Market entry from December 1, 2023.

Token distribution or Tokenomics

Name: GCWine (GCW)

Maximum amount: 105 000 000 000 000 000 000

Decimal point: 18

As you have already seen in Tokenomics, the token will be distributed as follows.

Distribution:

10% to the firm, which will be locked up for a period of 5 years and after this time will be sold in stages, 9% will be used to develop the mission and move to a higher level, and finally 1% will remain with the firm.

10% will be credited to employees and partners and will be frozen for three years, and active community members and the winners of the raffle will be gifted with tokens that will not be frozen.

80% will be sold, 70% through the ICO, 10% will be listed on the decentralized and centralized exchanges after the ICO is over, and also those that will be sold after the ICO expires, if there are any left.

From here - to BNB

10% will be transferred to the charity wallet, which will be sold in stages and will be spent on charity and various educational projects that will contribute to the digital and wine development of the society.

10% of BNB will be spent on marketing

10% of BNB will be used for salaries

70% of BNB will be used to implement the mission.

Although we cannot fully satisfy the main principle of DeFi decentralized finance, because "Georgia Wine Cradle" is a registered company in Georgia, which operates in accordance with the laws of Georgia and is subject to a centralized system, which is necessary for real-world existence and business activities. In order to make the GCWine (GCW) token as decentralized as possible as the main principle of DeFi "decentralization", For this we decided to distribute and sell 99% of the tokens to as many people as possible and out of 10% left for the firm, 9% will be sold in stages and only 1% will remain with the firm so as not to cumulate and centralize our token, thus fulfilling the DeFi precept to some extent .

10% of the tokens will be distributed to all those people who will contribute to the development of the company and the token, and the transfer will be blocked for 3 years, after the expiration of this period they will be allowed to sell the tokens or carry out any action within the law, the active members of the community and the winners of the draws will be given tokens as a gift, which will not freeze. This will function until the number of tokens in this 10% is exhausted.

The distribution will be as follows:

97% to employees and partners,

3% to members of the active community members and the winners of the raffle.

Based on our goals, we decided to sell 70% of the total amount through the ICO, and the remaining 10% will be listed on the market after the end of the ICO.

We warn you, transfer BNB only from the wallet whose PRIVATE KEY you control, under no circumstances transfer from any exchange or market, this will lead to the loss of your tokens, for which we remove full responsibility, and as mentioned above, you are responsible for this.

The first stage of the sale, or private sale, will start in Georgia and will cost 0.000 000 000 000 000 1 BNB Each applicant will be able to buy a maximum of 1 BNB tokens without registration, and a registered and verified user will be able to buy a maximum of 10 BNB tokens. Buying in BNB amount before verification is added to the site and after adding you can buy 10 BNB.

In order for everyone to be able to buy, the minimum amount to buy is not limited, but must not be less than the value of the transfer, so that the blockchain itself does not cancel the transaction. As you already know and read in the warning, investing in crypto is a very risky business, we do not recommend and do not recommend to enter our project with large amount of money, we warn you to use only the amount you are ready to lose.

We set the maximum buying limit so that crypto debt and big investors do not manipulate the GCWine (GCW) token and distribute it to as many people as possible. Our goal is for many people to have a small number of tokens, rather than a few people with a large number of tokens, that's why we have set an acceptable price for everyone, so that every citizen of the world who understands the risk of participating in it, can buy it.

3 months after the start of sales, the so-called public sale will begin and will continue for 1 year. The sale price of the public sale will be 0.000 000 000 000 16 BNB.

As soon as the public sales start, we will start a large-scale worldwide marketing campaign.

in case if that during the ICO period, which is estimated at 15 months, 70% were not sold, but the ICO was successfully implemented and with the money received, we started to implement the goals and plans for a certain period of time, all the remaining tokens intended for sale will be listed on various crypto markets.

Also after five years, the tokens left for the firm will be sold in stages, 9% of the total amount, and 1% will remain in the final ownership of the firm.

Charity

10% of the BNB paid as a fee for each token sold will be automatically transferred to a charity wallet, from which it will be sold from time to time and used for various charitable causes and educational projects.

According to the founder of "Georgia Wine Cradle", each person can make a small contribution to doing good in any way, everyone should be a philanthropist, but very few take these steps. Charity should be understood only as goodwill, which you either do or not, it depends on your will, it is only an expressed opinion and not an obligation of someone to do good deeds.

If you decide, at your own risk, to give away your blockchain knowledge and give a GCWine (GCW) token as a gift, this way you will promote crypto and also help those who need your help, thereby strengthening the crypto community together.

10% will be to promote the token so that as many people as possible know about our GCWine (GCW) token and form a strong community connected by various relationships or virtually.

10% will be used to pay the salaries of the staff employed by the firm until the firm's business can handle it. And

70% will be used for the implementation of the company's goals, for which various procedures are required, such as obtaining relevant licenses and permits, renting warehouse space, importing and exporting wine abroad, and other procedures related to certain costs and achieving the company's goals.

conclusion

Blockchain is the technology of the future that needs to be developed and supported. One of the best ways to do this is to integrate it into a real business. We believe in the formula of success that we have aimed for and we believe that each of you will become a part of this success and with your help we will be able to show the general public that blockchain technologies and crypto payments-transactions will become more accessible, convenient and reliable.
